TIME TO TOKEN

Condition Report

Summary: Excellent condition
Token Type: ERC721
Blockchain: Ethereum
Metadata Storage: On-chain (Ethereum)
Media Storage: Arweave (primary), Hanhart servers (secondary)

Technical Details

Additional Implemented Interfaces:
ERC165
ERC721Metadata
ERC721Enumerable
ERC2981

The token is a standard ERC721 token that can be listed on all NFT marketplaces.

Metadata and media data integrity is excellent:

- Token Metadata is stored on-chain and the „tokenURI“ method returns a data-URL.
- Media (images, 3D models) are decentrally stored on Arweave and centrally on the creator’s servers.

A 5% royalty payment to the token creator is automatically applied via:

- ERC2981 interface (used by Mintable and other marketplaces)
- Rarible 0xb7799584 interface.
- “contractURI” method used by Opensea.
